Colon Cancer At-A-Glance*

Colon cancer is the second leading cause of cancer-related death in the U.S.

On average, your risk is about 1 in 20, although this varies widely according to individual risk factors.

50+

90% of new cases occur in people 50 or older.

People with a first-degree relative (parent, sibling or offspring) who has colon cancer have two to three times the risk of developing the disease.

There are currently more than one million colon cancer survivors in the U.S.
